ITEC 204 – Data Structures and Algorithms

Name: Jeslyn Mae D. Macalos	Date: 9-24-26
Section: BSIT 2A	Instructor: Maxyne Nuela Ignacio

- I. **Objective:** Write a short explanation of what your program is designed to do. (Minimum of 3 sentences)

Answer:

This program helps manage IT incident tickets created by automation bots. It lets the user add, view, search, delete, and count active tickets using a simple menu. It shows how basic linear data structures are used to organize support tickets.

- II. **Program Operations:** Briefly explain how your program performs each operation. (Insert Specific Code Line and Your Explanation)

Add Incident:

Using the code `tickets.append(ticket)`, the program takes the user's input for the Incident ID, Bot name, and Description, stores them inside a new list, and appends it directly into the main records.

Display Incidents:

With the loop `for ticket in tickets:`, the system steps through the main list item by item to print out the details of every active ticket currently stored.

Search Incident:

By checking if `ticket[0] == search_id:`, the program compares each stored ticket ID against the search term entered by the user and displays the matching record when found.

Remove Resolved Incident:

Through `tickets.remove(ticket)`, the program locates the specific ticket that matches the provided ID and deletes that entire entry from the list once resolved.

Count Active Incidents:

Using `len(tickets)`, the program calculates and displays the total number of unresolved tickets remaining in the list.

College of Computer Studies

III. **Flowchart:** Create a flowchart showing the overall process and logic of your program.

IV. **Conclusion:** Briefly explain what you learned from the activity and how the linear data structure was applied.

I learned how to apply linear data structures to organize and manage data. Like applying the standard linear data structure operations adding new records with append, running loops to view active tickets and removing resolved ones and counting the records made it easy to update the incident tickets.
